To the full extent permitted by the applicable laws, the Cricket MetaVerse Company shall not be liable for losses of any kind stemming in connection with any acceptance of or dependence on this white paper.

EXECUTIVE SUMMARY

Cricket is played with bat and ball between two teams of eleven players on a 20 meters long pitch.

Cricket is a popular worldwide sport. Though cricket is more prevalent in certain countries, it is played worldwide. Major cricket events such Cricket World Cup are known for their colossal viewership.

Cricket video games have been around for over two decades, but virtual reality technology has transformed the way people play cricket. The metaverse will only make it better, and it is time to take cricket to the metaverse and experience it in the most immersive way.

Cricket MetaVerse is a gaming metaverse startup that is on a mission to make people play cricket in the most immersive way possible. It is a blockchain and crypto project that will contribute to NFT and metaverse fields.

This white paper highlights the importance of cricket, followed by a detailed discussion about the Crypto Cricket MetaVerse project.

FANTASY SPORTS MARKET

Background

The word fantasy sport refers to a game people play on the internet. In fantasy sports, participants create virtual teams. Then people play against each other to get points or scores.

The fantasy sports industry has is worth $23 billion in 2022, and over 60 million people regularly play such games in the US and Canada. Experts say the worldwide fantasy sports market will reach $40 billion by 2025. This dramatic rise is due to a growing number of fantasy sports participants worldwide. Advanced smartphones have made it easy for people to participate in high-end games.

There are still many problems causing this industry to stay low—like transparency, security, and speed. The third-party involvement in these projects also creates an uncertain environment for the people to engage appropriately. On the user experience and results, the impact of these problems is great.

Best-Suited Solution

Blockchain technology is known for its immutable transaction records (digital ledger). This technology represents a decentralized operation

method where transactions can be recorded safely. It is an excellent example of the finance industry meeting the technology industry.

Some people explain that blockchain is a distributed digital ledger designed to power and back cryptocurrencies, but that is not true. This particular technology can have numerous other applications, and Blockchain technology works under decentralization.

We mean that no single authority will control a decentralized system by decentralization. It refers to a self-sustainable system that works with the help of various parties that help complete transactions of different types.

Most of the large, small, and medium organizations (both private and governmental) we see today are centralized, which means an individual or an organization controls those systems as per their standard operating procedures.

Cricket MetaVerse is looking to revolutionize the decentralized world fully. Our development team is assigned to build a platform that entertains its users and helps them make money online. We are not just a DeFi token; we are the future of DeFi and decentralized cryptocurrency projects. Cricket MetaVerse is built to balance all aspects of its protocol and achieve sustainable long-term growth with strategically developed tokenomics and ecosystem.

ABOUT CRICKET METAVERSE

Cricket MetaVerse will forever change how our generation engages with cricket fantasy sport. We will be making a website and a mobile platform to provide a virtual cricket fantasy universe for avid cricket fans. Users can form their favorite teams and battle head-to-head against their rivals in epic tournaments with a touch of a button.

What is Fantasy Sports?
The word 'fantasy sport' refers to an online game where people complete and achieve other goals. The way people compete varies from game to game. Every game has some points system through which teams' success is measured. In the Cricket MetaVerse project, you can create your fantasy team based on a real-time match to score maximum points and win CMV tokens.

Project Background

A group of community investors has organized an international development team to complete this project. To always be a community-driven project, the development team at Cricket MetaVerse made sure the gaming community stayed involved in the improvement process.

What sets us apart here at Cricket MetaVerse is maintaining complete transparency for the project. We also hold polls and

discussions with the gaming community. This helps us make important decisions to make this game profitable, immersive, and enjoyable.

Business Model

The metaverse community will be able to compete in public or private tournaments. You will compete in any of the tournaments by creating your Cricket team. A user can participate in tournaments by paying entry fees paid in CMV tokens. Prize money will be decided based on the total token pool created by the participants.

Within the Cricket MetaVerse platform, every transaction will occur in CMV tokens. The competition win prizes will be sent to the winner using CMV tokens. There will not be any need to use banking systems or financial institutions.

The Cricket MetaVerse platform and our metaverse community users will be able to create and sell NFT avatars of their favorite players, team jerseys, cricket swags, or anything related to the cricket option to make money with Cricket MetaVerse.

Mission Statement

Cricket MetaVerse stands for creating the world's first cricket fantasy sports MetaVerse on the blockchain. We are on a mission to make cricket fantasy sport more immersive and enjoyable. Through community participation and revolutionary decisions, Cricket MetaVerse will always stay ahead of similar projects.

Our Vision

Cricket MetaVerse is striving to be one of the leading fantasy sports platforms in the world by 2025. Our operations and milestones are aligned with our objectives and goals. We are excited about our 2022 launch, and thousands of our followers are passionately waiting to be a part of the Cricket MetaVerse platform.

Our Objectives

The core objective of Cricket MetaVerse is to create a metaverse that simplifies the process of participating in fantasy sports using CMV tokens. We want to enable our platform users to build and sell NFT avatars and their favorite cricket team's jerseys.

Steps to Participate

- **Select A Match:** If you are ready to have fun, choose an upcoming match that sparks your interest.
- **Create Your Team:** If you know about players, you can use your team-making skills to create your team.
- **Join Competitions:** There are several contests all the time. Just choose between a tournament, play, and win money.

Earning Potential

You can create your fantasy team based on a live match at the Cricket MetaVerse platform to score the highest points and win big prizes.

Cricket MetaVerse is a unique platform that regularly hosts different tournaments. You have to pay a small entry price, play, and win exciting prizes worth millions.

CMV TOKEN

The Cricket MetaVerse platform will be built on Binance's blockchain. BEP-20 token standard of Binance Smart Chain will be used to create a robust ecosystem. CMV token is the lifeblood of the Cricket MetaVerse ecosystem. It will be used to perform numerous functions.
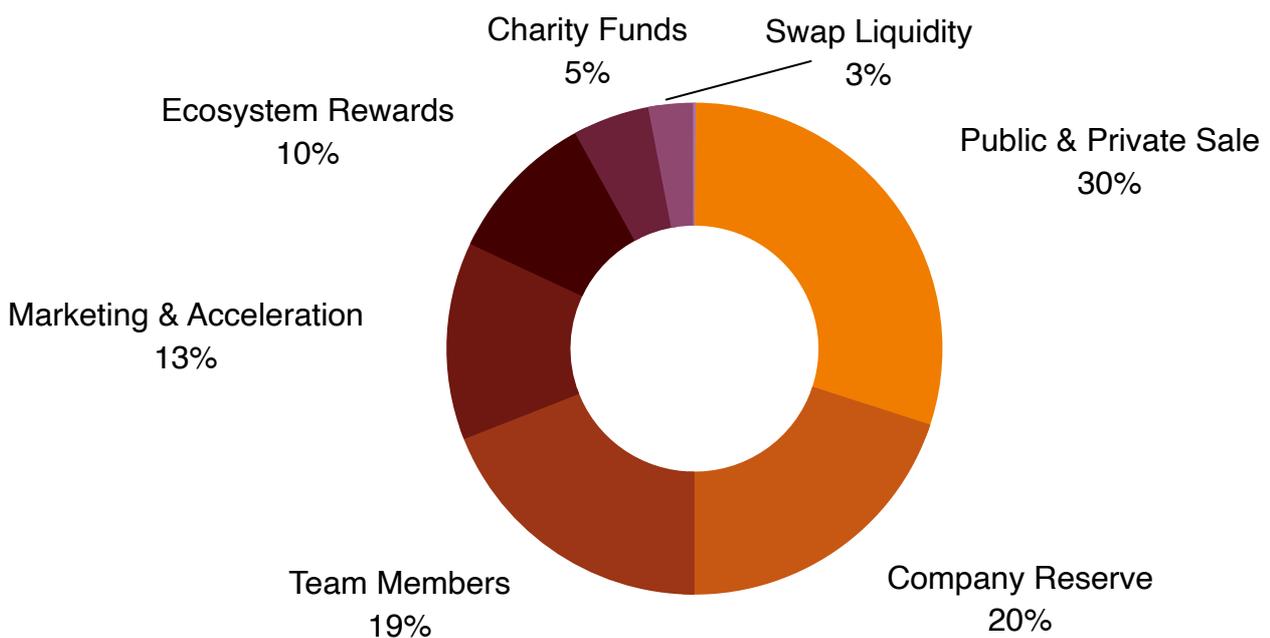

The platform users gain power by buying and holding CMV tokens. The more tokens a user has, the higher the user's ability to use the Cricket MetaVerse and earn income. Please check the following details to learn more about CMV tokens.

Token Name	Cricket MetaVerse
Token Type	BEP-20
Token Symbol	CMV
Initial Token Price	400M CMV for 1 BNB
Public Sale Percentage	30%
Total Token Supply	600,000,000,000
